

A good connection – Telescopics and the Vigano® Attachment

The Vigano V1 Attachment enables the manufacture of very affordable cover dentures in telescopic, cone or implant technology.

The plastic matrixes, which easily snap into place and can be replaced if necessary, guarantee that the prosthesis is firmly anchored, eliminating the need for secondary crowns and enabling production in NEM alloys.

Instead of expensive veneered teeth, one can

work with fitted teeth which can be set directly in front of the primary crown after appropriate polishing, providing an aesthetically attractive solution.

The very significant savings in material costs and work time that result can reduce the overall costs in comparison with conventional prostheses by up to 50%.
